Tetra Support System

The Tetra Support System (TSS) provides multiple solutions for LCD flat-screen monitors. In addition to providing ergonomically-correct positioning of the monitor, the TSS reclaims valuable space on the desktop. Constructed of high-strength extruded aluminum, the "Tetra" 4-slot posts can support one or many monitors in single-user or multiple-user applications.

The monitor support arms attach to the posts using heavy-duty steel clamps. Height adjustment is managed through a simple twist of two knobs. All four arms feature a large ball joint that allows the monitor to swivel in any direction. Both articulating arms allow easy distance adjustment from 1 to 16 inches with side-to-side movement of more than 180°. A monitor quick release system is optional.
